

# Managed Online Backup Service

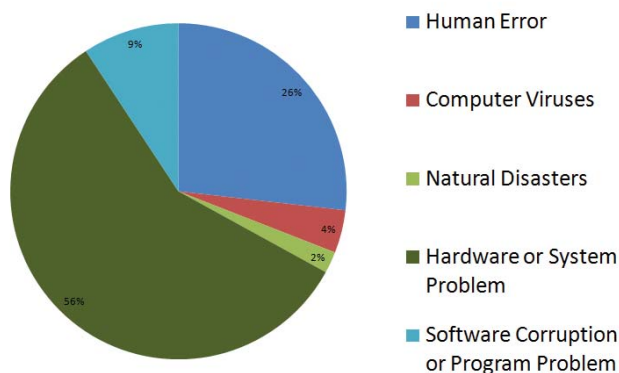

Cyber Solutions now offers managed online backup services. This solution effectively allows offsite backups to be made frequently, securely, and effortlessly. Whether you are looking to backup your important documents on a single computer or critical information on your corporate network, our remote backup service can help you.

Information can be lost in many different ways - all of which can be a damaging blow to your businesses productivity and bottom line. In most cases, the loss of a single document costs far more than monthly dues. Cyber Solutions can help you prevent the costly event of a data loss.

Backups can be automatically and securely executed on a daily basis or even up to the minute with our continuous replication technology. After the initial backup, only changes to your files are backed up - allowing for quick and effective transmissions to our secure data center.

Common Causes of Data Loss

Source: Kroll Ontrack
